PROFILE

Computer Engineering graduate from the University of Valencia (2026, thesis 9/10). I build and maintain **full-stack** applications end to end: front end in Angular and React, back end in NestJS, Spring Boot and FastAPI, PostgreSQL, and self-managed deployment on a Linux VPS with Docker and nginx. Four personal projects **running in real production**, not demos. I come from seven months of consulting at **Capgemini DCX**, working in an agile setup writing user stories and designing pre-development test suites. Looking for my first full-time role as a full-stack developer, also interested in **QA / test automation**.

WORK EXPERIENCE

Salesforce Junior Consultant (Intern) | Capgemini España S.L. Oct 2025 – Apr 2026 · Valencia
DCX (Digital Customer Experience) unit · implementation team for a European client · agile methodology.

- Wrote **user stories** and designed **pre-development test suites**, collaborating with QA and architecture.
- Modeled custom objects, fields, validation rules and permission sets for new service flows.
- Declarative automations with Flow Builder: Record-Triggered, Screen Flows and Scheduled Flows replacing recurring manual processes.
- Configured Lightning Pages and designed email templates for end-user-facing flows.
- European data migration (postal codes for four markets) with Data Loader and Data Import Wizard, handling duplicates and post-load validation.
- Ongoing internal training: Generative AI in Software Engineering, Refactoring, **Testing + Continuous Integration**, Lowcode, Design Thinking and Innovation.

Transport / Catering | Integrastu 2022 – 2024 / 2026 · Valencia

- Occasional transport and event catering assignments, combined with my studies.

PROJECTS

TallerApp — Bachelor's Thesis | Angular 21 · NestJS 11 · PostgreSQL 16 2026

- Full management system for a multi-brand car repair shop: customers and vehicles, work orders, PDF invoicing with email delivery, traceable stock inventory and a KPI dashboard. Its core is a **scheduler** — a sequential queue per mechanic that respects the shop's real working hours and chains availabilities. State machines for orders and invoices, and **259 unit tests with Jest** covering the critical flow. TypeORM, PrimeNG, JWT + Passport. **Grade: 9/10 (Distinction)**.

POLYBOT — Algorithmic trading | Python 3.12 · FastAPI · Angular 21 PWA 2026 · in production

- Autonomous bot trading weather markets on Polymarket with real money: it pulls the Open-Meteo GFS ensemble (31 members), builds the empirical probability distribution, compares it against the order book and places on-chain orders. 33 tracked markets, 8 active. LLM decision agents (Ollama), three layers of risk gates, on-chain fill reconciliation with web3.py on Polygon, and a PWA dashboard with push notifications.

Gym Tracker | Angular 21 zoneless · FastAPI · PWA 2026 · in production

- Installable PWA for logging workouts: routines with supersets, live session with autosave and a rest timer that survives phone lock via Web Push. History, progress charts and a Coach that suggests cyclic double progression. Own login with **passkeys (WebAuthn / Face ID)**. In daily use since April 2026.

Finance Manager | Java 21 · Spring Boot 3.5 · React 19 · Docker

2026 · in development

- Personal finance manager replacing two spreadsheets: bank transactions with a verification queue, rule-based categorization, bucketed investments, net worth and savings goals. **15-table schema versioned with Flyway** and the transactions vertical working end to end against the backend.

Web JASB | jasbct.com — HTML5 · Bootstrap 5.3 · vanilla JS

2025 – 2026 · in production

- Corporate website for JASB Energía & Telco with a custom ES/EN i18n system, Schema.org and SEO optimization. Accessible and free of heavy dependencies.

TECHNICAL SKILLS

Frontend: Angular 21 (zoneless, Signals) · React 19 · TypeScript · JavaScript · HTML5 / CSS3 · PWA (Service Workers, Web Push) · PrimeNG · Bootstrap

Backend: NestJS · Spring Boot 3 · FastAPI · Node.js · Java 21 · Python 3.12 · REST APIs · JWT · WebAuthn

Data: PostgreSQL 16 · TypeORM · Flyway · SOQL · schema design and migrations

Testing & quality: Jest (259 unit tests in TallerApp) · test case design · continuous integration · code review

DevOps & tools: Git · Docker · GitHub Actions · Linux / Ubuntu VPS · nginx · systemd · Bash · Postman

Salesforce: Apex · Flow Builder · Lightning Web Components · SOQL · Service Cloud · Administration

Other languages at academic level: C++ · Kotlin · PHP.

EDUCATION

Bachelor's Degree in Computer Engineering

Graduated 2026

University of Valencia, ETSE – Burjassot, Valencia

- Thesis: TallerApp — full management system for a car repair shop (Angular + NestJS + PostgreSQL). **Grade: 9/10 (Distinction).**

Angular: From Zero to Expert | Udemy

CISCO CCNA v7 Certifications

- Introduction to Networks · Switching, Routing and Wireless Essentials · Enterprise Networking, Security and Automation.

SALESFORCE ECOSYSTEM

Trailhead Profile · Expeditioner | 77 badges · 66,200 points · 21 trails —

salesforce.com/trailblazer/mariosanchiscolomer

Completed training in Salesforce Administration, Apex and Apex testing, Lightning Web Components, Flow Builder, Service Cloud, data security and CRM Analytics. Seven months of real consulting experience (Capgemini DCX) and an active profile: a path I keep open should the right opportunity come up.
